Re: Sole Source Certificate for HYDROS 21 sensor

To Whom It May Concern:

This is to certify that METER Group, Inc., a company based in Pullman, WA, is the sole manufacturer of the HYDROS 21 sensor and compatible data loggers.

The HYDROS 21 sensor was designed for continuous monitoring of the following environmental variables: bulk electrical conductivity (EC), temperature, and water level. The water level is measured using a differential pressure transducer that is vented to compensate for barometric pressure effects. Temperature is measured using a thermistor. Electrical conductivity is measured using a four electrode Wenner array. The sensor requires 3.9-15 VDC and has a digital output. This sensor is compatible with ZENTRA or EM50-60 data loggers, or able to be integrated with compatible third-party data loggers.

Each sensor is calibrated at our facility before it is shipped. The HYDROS 21 sensor is manufactured at METER Group's facility in Pullman, Washington and sold directly to the end-user (as well as to domestic irrigation management representatives and international distributors). The product has a one-year warranty that covers all necessary maintenance or repair, an attempt at sensor maintenance outside of METER will void this warranty.

Any comments or questions regarding this document can be brought to my attention.

Sincerely,

Leo Rivera
