Re: Sole Source Certificate for SATURO infiltrometer

To Whom It May Concern:

This is to certify that METER Group, Inc., a company based in Pullman, WA, is the sole manufacturer of the SATURO dual head infiltrometer and supplies it to all clients in the US

The SATURO was designed to automate the process of measuring field saturated hydraulic conductivity. This measurement is often time consuming to measure and requires even more work to process the data once collected. While the SATURO runs unattended, the user can perform other necessary work in the field. It automates the well-established dual-head method which measures infiltration at two different pressure heads to estimate sorptivity. This simplifies the three-dimensional flow analysis, allowing you to determine field saturated hydraulic conductivity without making any dubious assumptions.

The SATURO is manufactured and verified at our facility before it is shipped. They are all made in our facility here in Pullman, WA and sold directly to the end-user (as well as international distributors). The SATURO has a one-year warranty that covers all necessary maintenance or repairs.

Any comments or questions regarding this document can be brought to my attention.

Sincerely,

Leo Rivera
