Re: Sole Source Certificate for TEROS 22

To Whom It May Concern:

This is to certify that METER Group, Inc., a company based in Pullman, WA, is the sole manufacturer of the TEROS 22 soil water potential sensor.

The TEROS 22 was designed for long-term monitoring of soil water potential (matric potential or soil suction) and temperature. The sensor is individually calibrated and provides a full measurement range of 0 to -100,000 kPa with onboard temperature measurement. It has DDI serial or SDI-12 output and is compatible with METER ZL6 and EM60 data loggers, as well as systems capable of supplying 4–15 VDC and communicating by serial or SDI-12.

The TEROS 22 is engineered for low-maintenance field use, with low salt sensitivity and no required recalibration. It can be installed through a 16 mm (5/8 in) drill hole or in a trench, and it can be removed and reused. Its compact form supports quick installation with minimal site disturbance. The product has a one-year warranty that covers all necessary maintenance or repairs to prevent any factory defects.

Any comments or questions regarding this document can be brought to my attention.

Sincerely,

Leo Rivera
